ABOUT US

The AddSeat story began in 2010 in Sweden with Marit Sundin who had a desire to enhance freedom and ease daily challenges. Driven by a vision to empower users to navigate life without the constraints of traditional wheelchairs, the AddSeat allows for unparalleled maneuverability in diverse environments, from indoor spaces to challenging outdoor terrains.

Fueled by feedback from our global community, the AddSeat has evolved into a leading solution for expansive indoor and adventurous outdoor mobility.

Through innovation, customisation, and a deep understanding of its users' needs, AddSeat transforms every challenge into an opportunity for adventure and connection, utilising advanced Segway PT Gyro technology.

Over the past 12 years, AddMovement, the creator of AddSeat, has garnered support from prestigious institutions including the University of East Anglia, European Startup Prize for Mobility, EIT Health, Health Tech Nordic, and Innovate UK.

These partnerships underscore our commitment to innovation and excellence in developing mobility solutions.

OUR GOALS

1. Enhance User Independence

Our primary goal is to enhance the independence of our users, enabling them to navigate life without constraints. By continually refining our mobility solutions, we aim to provide tools that expand personal freedom and allow for a more active lifestyle.

2. Drive Technological Innovation

We are committed to pushing the boundaries of mobility technology. By harnessing advancements in design and engineering, we strive to develop products that offer superior performance, safety, and ease of use.

3. Focus on User-Centered Design

Our designs are deeply informed by the needs and feedback of our users. We prioritise comfort, customisation, and practical functionality, ensuring that our products not only meet but exceed the specific requirements of those who use them.

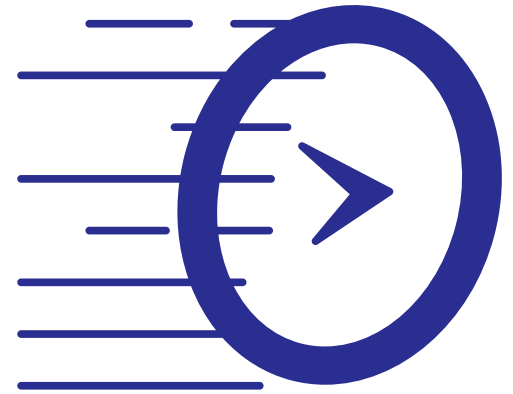

OUR PRODUCT

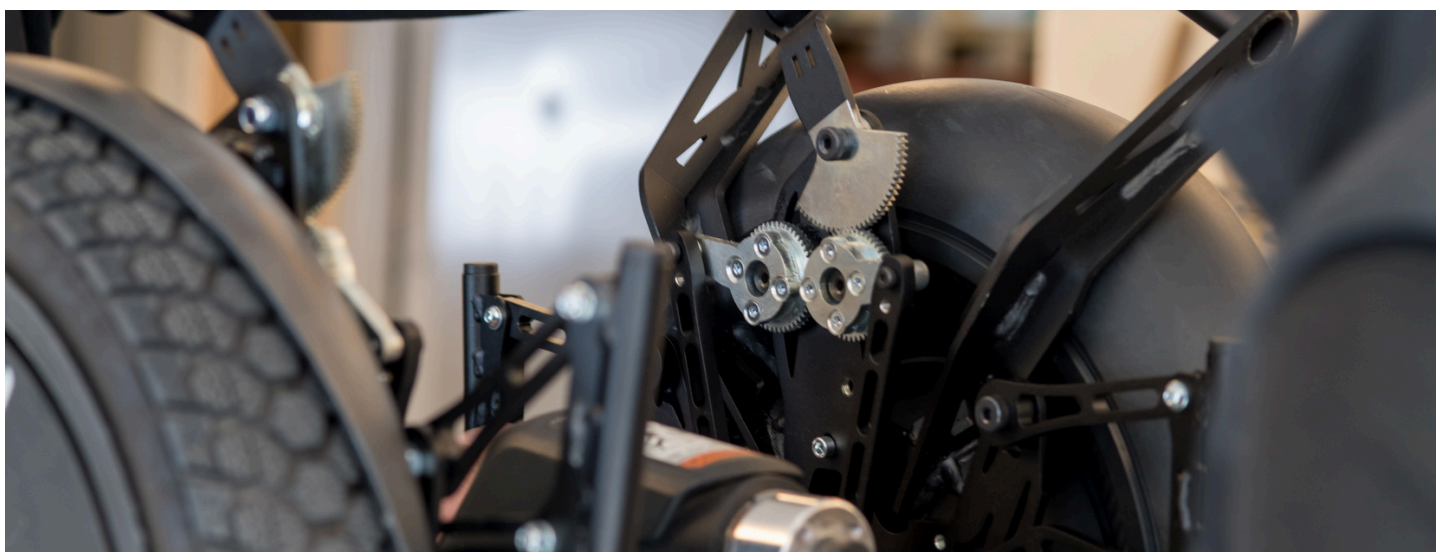

Performance Features

Speed: **0-20 km/h**, offering smooth and quick mobility. Model-specific range: **i2 - 25 km**, **x2 - 19 km**, ensuring ample distance for daily activities.

Adjustable Comfort

Height-adjustable seat ranges from **60-75 cm** from the ground, allowing users to achieve a comfortable and conversation-friendly height. The airride system acts as a **shock absorber**, enhancing comfort over uneven terrain.

Customise your AddSeat with options for flat or curved backrests, adjustable steering handles, and a selection of vibrant colors. Our manual parking solution offers robust stability for safe transfers, ensuring the AddSeat fits perfectly into your life.

CLIENT REVIEWS

"I have taken the AddSeat off-road through pastures and other hiking trails. The AddSeat has changed my life and allowed me to experience nature like I never thought I would be able to experience again! I am truly blessed to have made that phone call as their product has ultimately changed my life."

- Miguel, USA

"The freedom I regained makes me cry to this day. I can now do things I thought were no longer available to me being a SCI T-11 paraplegic. I battle with depression often but now with the AddSeat my outlook is totally different. I haven't felt this way since before my accident. My wife and friends have noticed the self confidence embolden within me."

- Marcellino, USA

"I looked around for a long time. Living Spinal sent me some info on a lot of the units they have. I decided to get the AddSeat because of the rising seat. It's so smooth and comfortable. The rising seat really helps my spasms since I can adjust it."

- Jake, USA

CLIENT REVIEWS

“Thanks for the great time with my AddSeat, the greatest aid ever, and thank you for the collaboration with both of you.”

- Christian, Denmark

“I absolutely can not believe how much of my life has come back. I won't say it's normal because that is untrue. My life is still a pain in the rear, but somehow looking out for 100 miles from a place I couldn't get to takes the edge off. Somehow rolling around the house with pinpoint precision makes going outside or helping with the dishes doable.

The beast is expensive. Get over it. It's powerful and might scare the daylights out of you. Get used to it. There is nothing, and I mean nothing, that will give you more of your life back than this thing.”

- Mike, USA
